

## SURFACING FOR SCHOOLS

Paved outdoor areas within school grounds are important spaces for students to gather, learn and be physically active.

The opportunity exists for the ground plane to be transformed into an inviting space for play, sport, art, learning to ride, games and having fun.

Coloured surfacing is a way of achieving the transformation and the Parklife team have sourced and are experienced in applying the Mapei TNS system to achieve a result long into the future.

### MAPEI TNS RANGE

Mapei is an international company providing high quality sports surfacing products since the 1976 Montreal Olympic Games.

Mapei's multi-layer sports-specific coatings systems - the TNS range - is fit for purpose, forming hard-wearing play surfaces which protect the concrete or asphalt in 36 standard colours and tint-able custom orders.

Extensive options include high-build basecoats with medium to high elasticity for softer surfaces, and the heavy-duty 'Racetrack' line, suitable for areas subject to heavy vehicular traffic.

Each coat of the TNS range is trowel applied to a specific thickness depending on the nominated system's requirements by our Mapei trained and approved application team.

A key feature of the product is it's inclusion of levelling agents for evening out cracked and dilapidated surfaces.

Parklife's in-house Landscape Architects can work with the school to develop custom designs that can be realised on the ground.

### APPLICATIONS

Sports\_ Multi courts

Games\_ Four Square, Snakes & Ladders and Hop Scotch

Ride\_ Bike Paths, Scooter Trails and Roller Skating Rinks

School Branding\_ Walkways, Entrances, Walls and Steps.

### MAINTENANCE

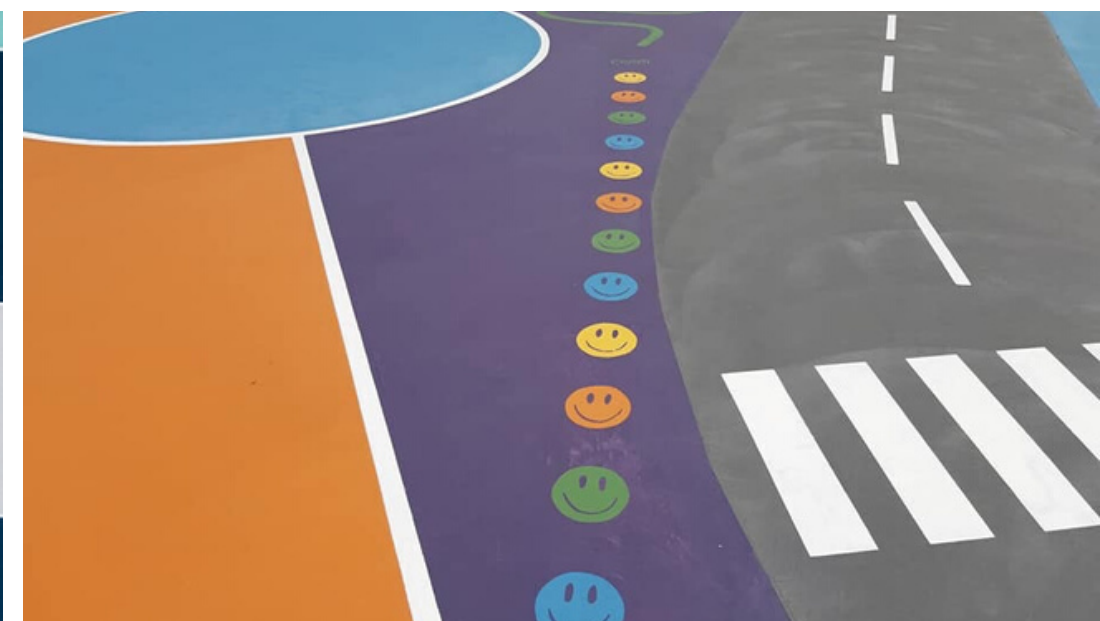

Light water blast annually.

Coating can easily be 'refreshed' with a new top coat every 7-10 years.

5 year Workmanship and 10 year Product Warranties.

### CLIENTS

Auckland Council, Christchurch City Council, Development Canterbury Ltd (DCL), Nelson City Council.

epoxyflooring.
