TECHNICAL SPECIFICATIONS

Structural Integrity
Engineered for high-velocity, repeated ball impacts to meet the demands of public recreational spaces.

Approved a Chartered Professional Engineer to meet the NZ Building Code and Building Act 2004.

World-Class Manufacture
Manufactured by leading sports fencing specialists to ISO 9001 standards, ensuring world-class material consistency and build quality.

Sports Code Compliance & Play Safety
Meets stringent public safety and sports performance standards including:

- 1. SAPCA (Sports and Play Construction Association) is the leading UK industry standard for sports and play construction. Meets the SAPCA Code of Practice for:
 - + Construction of Outdoor Multi Use Games Areas
 - + Construction and Maintenance of Fencing Systems for Sports Facilities.

- 2. BS EN 15312, the European standard for "Free-access multi-sports equipment," ensuring its suitability and safety for public, unsupervised use.

- 3. RoSPA (Royal Society for the Prevention of Accidents) safety guidelines.

- 4. NZ Playground Standard NZS 5828:2015 - adhering to the principles regarding entrapment.

Advanced Corrosion Protection
All structural components are galvanized and finished with a premium powdercoat system, providing superior protection in even the most aggressive high-corrosivity environments (C4 / Zone 4: HIGH).

316 Stainless Steel hardware for maximum strength and corrosion resistance.

Superior Rebound & Acoustic Performance
A high-density 'DUO8' twin-wire mesh panel (dual 8mm horizontal wires and single 6mm vertical wires) provide exceptional rigidity, panel flatness, and a true, predictable ball rebound.

Integrated noise-dampening inserts drastically reduce acoustic vibration and "rattle" during play.

Vandal-Resistant Fixings
High-security, full-length clamp bar fixing prevents panel removal and provides a clean, safe finish with no external-facing bolts.

Colours
Available in a choice of premium powdercoat colours.

Warranty
5 year.
